

My name's Orlando Machado and I am chief data scientist at Aviva.

The Trinity Challenge is needed because we're facing a global crisis, not just in the short term but with real long-term impacts on health and economic wellbeing.

Data science and analytics can play a role in solving this, but if we're really going to crack it, we're going to need to work together.

And we're supporting this challenge because for over 300 years we've been there to help people manage risks around the things they value most. Their health, their families, their livelihoods.

We think that this group has real power to make a difference.

I am really excited to be supporting this challenge. I think we can help people across the world and I'm proud that Aviva can play a part.
