

At Aviva, we're committed to acting now on climate change through affordable and clean energy.

For a greener future we need reliable, renewable energy.

Twenty-four seven. Three hundred and sixty-five.

We're proud to present the Aviva Scotland Solar Project.

Featuring over 3,000 solar panels supplying 100% of the site's energy for up to 5 hours every day.

Plus 50 on-site charging points to help even more of our people switch to electric vehicles.

Created in partnership with the Scottish Government it will save nearly 400 tonnes of carbon emission every year.

That's the equivalent of powering over 500 homes or a small town with zero emissions.

Day after day. Year after year.

Powering renewable solutions to build a better tomorrow, for us all.
